

"Safe Water, Smarter Protection, Stronger Flock Performance."

"Water is one of the most critical nutrients in poultry production, yet it is often the most overlooked. When drinking water carries excess microbial load, biofilm challenge or inconsistent pH, it can reduce water quality, compromise gut balance, and affect overall flock performance."

Dual-action value

Sanitization and acidification a single step for simpler, tighter water management.

Farm-friendly use

Easy continuous-use program that can be executed confidently by on-farm ground staff.

Bird-first focus

Cleaner water plus optimized organic acids to support gut balance, health, and livability.

One Solution. Two Essential Actions.

AZURRO Sani-X is designed to solve two essential needs in one practical solution water sanitation and water acidification.

- Supports a favorable pH for better intake
- Reduces mortality in adult birds and improves the FCR/ Performance
- Helps to maintain gut health
- Reduces Bio-film and the consequences
- Improves sanitation performance
- Supports growth by reducing Subclinical / Clinical E. coli spp.

How AZURRO Sani-X works

1 Sanitizes

Helps reduce unwanted microbial load

2 Supports Line Hygiene

Helps act against biofilm build-up in lines

3 Acidifies

Supports better water quality management through optimized acidification

4 Supports Bird Performance

Promotes a more favorable gut environment and better daily performance support

Why AZURRO Sani-X?

"Its time-tested blend of selected organic acids, supported by a potent anti-microbial component, helps maintain clean, pathogen free drinking water, supports better waterline hygiene, and creates a more favorable environment for bird health and performance"

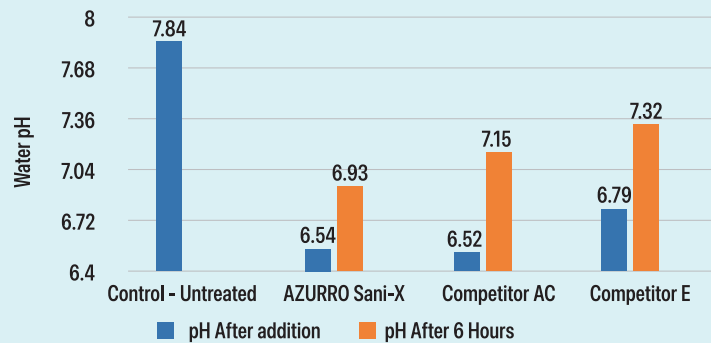

From Water Challenge to Better Field Performance.

Farm-level advantages

- One product instead of separate acidifier and sanitizer programs.
- Simple daily application for field teams and routine farm use.
- Compatible with antibiotics.
- Economical for continuous use.

Farm test Samples and pH status after 6 Hours

Reliable pH control Under hard-water condition

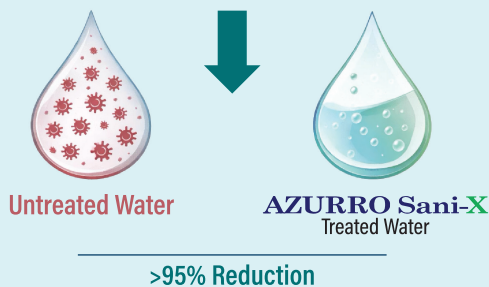

Recommendation

Broiler / Breeder / Layer - 2-3 ml onwards per 10 Liter water.

To prevent CCRD, and *E. coli* spp build up & chronic farm challenges 3ml+ per 10 Liter water.

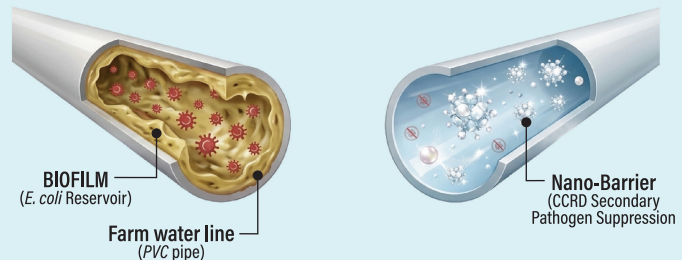

Demonstrated Reduction in Microbial Load

Clearly shows the reduction in total microorganisms after treatment

Benefits of AZURRO Sani-X

Reduces Biofilm Formation over the long usage

Key Benefits

- Maintains stable acidic conditions even in high mineral (hard) water.
- Promotes faster growth and better weight gain.
- Supports long-lasting activity in the gut for improved performance.
- Lowers harmful bacterial load in drinking water.

Farmer ROI Impact

- **Improved FCR:** Lower feed cost per kg gain.
- **Lower Mortality:** Particularly in Finisher stage due to CRD/CCRD.
- **Better growth rate:** Earlier market weight.
- **Reduced disease pressure:** Lower medication and mortality costs.
- **Cleaner water:** Consistent intake and uniform flock performance
- **Overall:** Higher profitability per bird

Pack Size: 5 kg HDPE Jar
