

YAASHGUARD 

 **YVS**
YENSUREX™

Lower risk. With Feed pathogen Control Program

“Cleaner Feed. Lower Pathogen Pressure. Better Performance”

Advanced Feed Hygiene Solution

YAASHGUARD is a synergistic feed hygiene solution built on a carefully selected combination of organic acids, their salts, and surface-active technology. It is designed to support cleaner feed, help reduce microbial pressure, and contribute to better gut health and performance in poultry.

Organic Acids + Acid Salts

Carefully selected active ingredients designed to support feed hygiene and stability.

LeciSpread Technology

Enhances ingredient spread, contact, and activity for improved effectiveness.

Cleaner Feed, Lower Microbial Pressure

Supports a cleaner feed environment and helps minimize microbial contamination.

Fortified with LeciSpread Technology

A dry surface-active support that helps the active system spread more uniformly across feed particles, dust, and mixer residues for improved contact and performance.

MODE OF ACTION

YAASHGUARD penetrates feed residues and microbial surfaces with a synergistic acid-formaldehyde system, disrupting cell membranes and essential microbial functions. By delivering rapid kill and prolonged hygiene protection, it helps lower Salmonella pressure from mixer to finished feed.

Why YAASHGUARD ?

Key advantages of an advanced feed hygiene solution

Reduces Microbial Load

Helps reduce microbial load in feed, and provides rapid antimicrobial support

Improves Feed Hygiene

Improves overall feed hygiene in the mill and in finished feed.

Easy to Use

Easy to use in routine and challenging situations.

LeciSpread Technology acts as a dry surface-active dispersing aid, helping YAASHGUARD spread more uniformly across feed particles, mixer residues, and dust surfaces for better active contact and improved hygiene performance.

Improved Dry Dispersion

Enhances flow and spread of actives in dry blends.

Better Contact with Dust & Residues

LeciSpread™ reaches and wets more surfaces.

More Uniform Active Distribution

Promotes even coverage across every feed particle.

Enhanced Feed Hygiene Support

Supports cleaner mixers and safer feed.

Recommended Usage

- **Routine Use:** 0.5–1 kg per metric ton of poultry feed
- **During High Contamination Risk:** 1.5 kg per metric ton of as per nutritionists
- **Feed Mill Sanitation :** Apply YaashGUARD at **150–200 kg per 1 MT mixer capacity**, in combination with DORB, grounded maize, to effectively control pathogen contamination in poultry feed manufacturing.
